Windows Setup

Installing Global Protect VPN for Windows

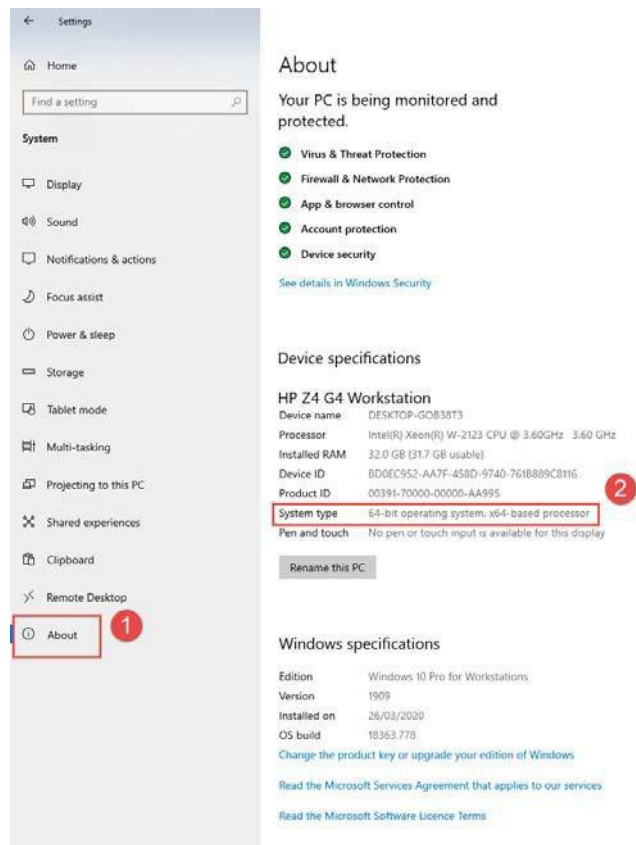

Before installing GlobalProtect VPN client on Windows you will need to know what type of system you are installing on. To find this information, click on Start and then the Settings Icon

Then click on System from the Windows Settings window

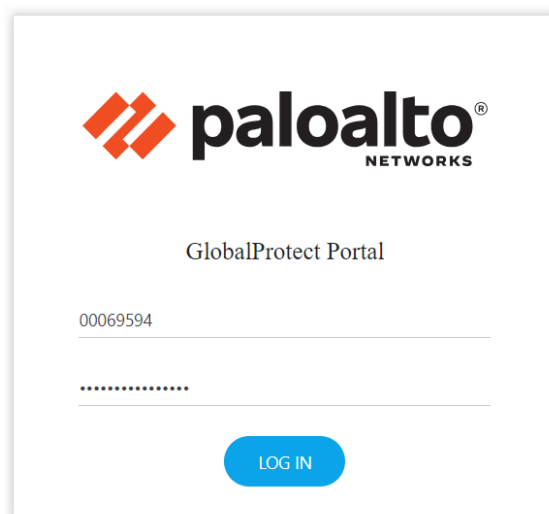

On the System Settings screen, click **About** in the list on the left side, and then look at System Type to see if the system is 32-bit or 64-bit.

Once the System Type has been determined, open a web browser (Chrome, Internet Explorer, Firefox, Edge, Safari, etc.) and type the address below in in the address bar

<https://remote.udst.edu.ga>

When the login screen is displayed, enter the **user account** and **password**, and click the **Log In** button.

GlobalProtect Portal

[Download Windows 32 bit GlobalProtect agent](#)

[Download Windows 64 bit GlobalProtect agent](#)

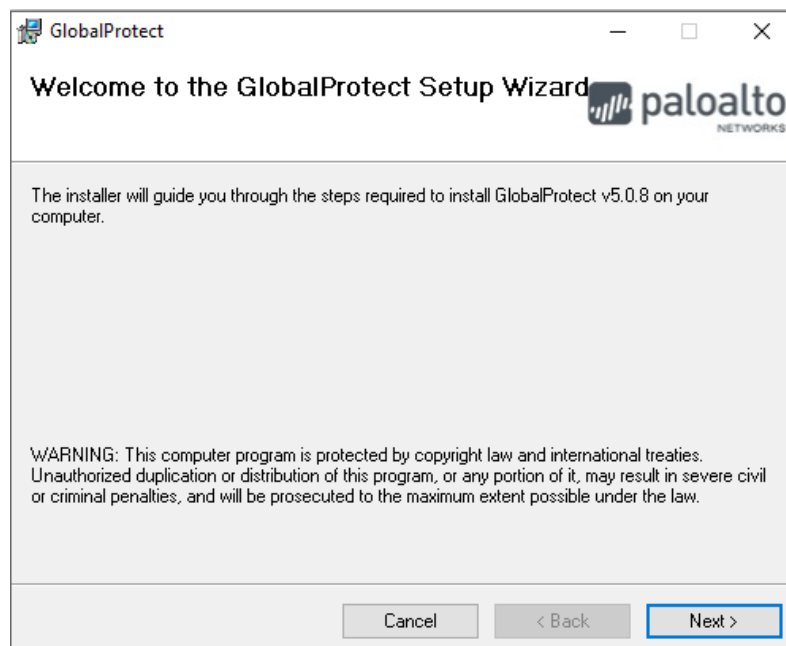

[Download Mac 32/64 bit GlobalProtect agent](#)

Windows 32 bit OS needs to download and install Windows 32 bit GlobalProtect agent.

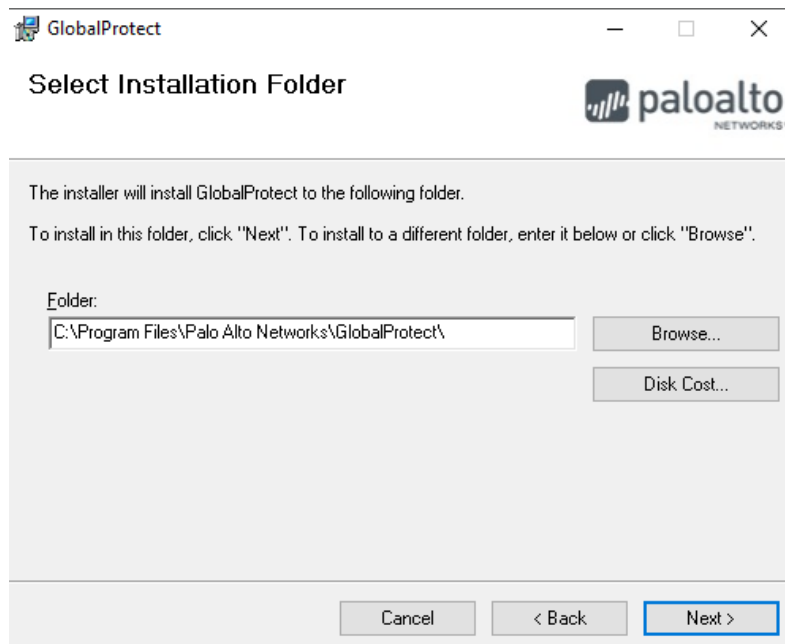

Windows 64 bit OS needs to download and install Windows 64 bit GlobalProtect agent.

Mac OS needs to download and install Mac 32/64 bit GlobalProtect agent.

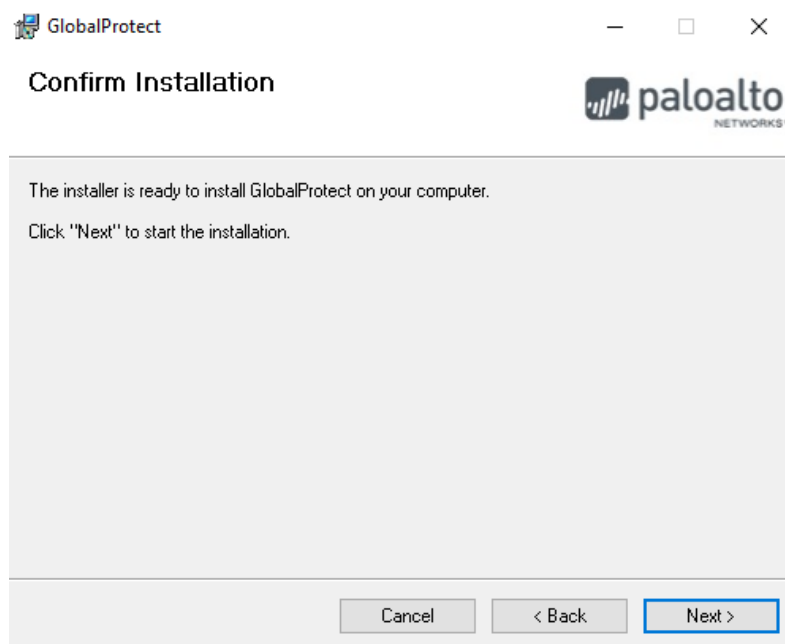

Click the correct version of the installer. Once the file is downloaded, go to the Downloads folder and double-click the install file to run the installation.

Click **Next**

Click **Next**

Click **Next**

Once the Global Protect VPN client has been installed, you will see a pop-up in the lower right corner near the clock. In the address box type:

remote.udst.edu.qa

and click the **Connect** button.

When the connection is made, enter your ID number and password, and click the **Sign In** button.

Best Available Gateway

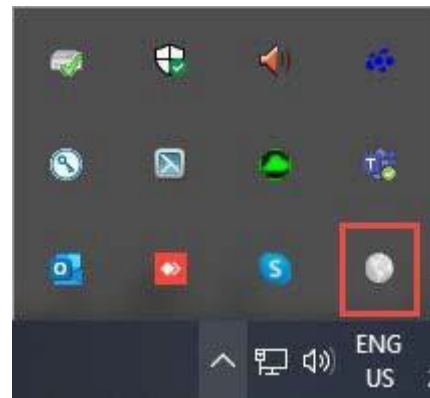

Disconnect

Connecting to Global Protect after the first time.

After GlobalProtect has been installed, it will remain in the system tray to be connected or disconnected when needed.

Connected

Not Connected

When it is not connected, simply click on the GlobalProtect icon and the connect button will appear. Since the connection settings were entered when it was installed, there is no need do anything other than click the **Connect** button. When the session is over and the VPN connection is no longer needed, click the GlobalProtect icon in the System Tray again and click the **Disconnect** button
